

Would your employees walk on nails for you?

Not likely – without penetration resistant footwear!

How do we develop and keep dedicated employees in this day and age? Protecting their feet is a great start! According to the National Safety Council there are approximately 120,000 job-related foot injuries every year, many of which are a result of penetration or puncture injuries. One out of four victims of these injuries chose just "any type" of footwear to wear – not necessarily puncture resistant safety footwear! An injury of this nature will cost your company in lost revenue, productivity and higher worker insurance rates. Safety footwear with ANSI approved, BUILT-IN penetration resistant Steel-Flex® stainless steel sole plates does exist and should be worn by employees – for your own good! Protect your company and your employees! Make sure they wear protective safety footwear with built-in protection! With it, they may very well walk on nails for you – and thank you for it!

Our partners – including Baffin, Bata, Boulet, Canada West, Carolina, Danner, Falcon, Genfoot, H.H. Brown, Kodiak, L.P. Royer, LaCrosse, Norcross, Red Wing, STC, Tatra, Terra, Weinbrenner, and Wolverine – build this kind of footwear!

STEEL-FLEX®

A world leader in safety footwear components since 1962!
